# Pips Ledger — Setup Guide

Trade journal for the Funding Pips $5K and $10K accounts. Next.js + TypeScript + Supabase.

## 1. Create the Supabase project

- Go to supabase.com, create a new project (free plan is enough).
- Open **SQL Editor** → New query → paste the full contents of `supabase/schema.sql` → Run. This now also grants the table access the website needs.
- Open **Project Settings** → **API** and copy the **Project URL** and the **anon public** key.

## 2. Create the 4 users

- **Authentication** → **Sign In / Providers**: turn off new user sign-ups so only people you create can log in.
- **Authentication** → **Users** → **Add user** → **Create new user** for Salman, Kumaran and the two viewer friends (tick Auto Confirm).
- In a new SQL query, make you and Kumaran admins (replace the emails):

```
update public.profiles set role = 'admin', full_name = 'Salman'
  where email = 'salman@example.com';
update public.profiles set role = 'admin', full_name = 'Kumaran'
  where email = 'kumaran@example.com';
```

The two friends stay **viewer**. They can see the sheet and analysis and download files, but the database blocks any add, edit or delete.

**If the site says "permission denied for table trades" or shows View only for an admin:** run the four `grant` lines near the end of schema.sql in a new query, then the two admin updates above.

## 3. Run locally

```
cd pips-ledger
cp .env.example .env.local     # fill in the values below
npm install
npm run dev
```

| Variable | Value |
|---|---|
| `NEXT_PUBLIC_SUPABASE_URL` | Project URL |
| `NEXT_PUBLIC_SUPABASE_ANON_KEY` | anon public key |
| `NEXT_PUBLIC_MT5_OFFSET_MINUTES` | 210 = MT5 time + 3h 30m |
| `NEXT_PUBLIC_LOCAL_UTC_OFFSET_MINUTES` | 330 = India (UTC+5:30), for sessions |

## 4. Deploy on Vercel (free)

- Push the project to GitHub (`.env.local` is git-ignored).
- On vercel.com: Add New → Project → import the repo.
- Add the 4 environment variables from the table, then Deploy.

## 5. Pages

- **Sheet**: $5K / $10K tabs, trader filter, running total per row, green/red numbers, "1 day gap" lines. **Download** button gives Excel (.xlsx with colours), PDF or CSV of the account you are viewing.
- **Analysis**: advice for today (day, live time, current session, month period), key findings, and win rate / net result by session, entry source, weekday, part of the month, currency, trader and direction. Groups with fewer than 3 trades are greyed and ignored for findings.
- **Add trade / Manage** (admins): add form with MT5 time conversion, and a table with Edit and Delete.
- A loading bar and spinner show while pages are opening.

## 6. Sessions and the time settings

Sessions are measured from each trade's saved local time: Asian 00:00–08:00 UTC, London 08:00–13:00 UTC, New York 13:00–22:00 UTC (the London/New York overlap counts as New York). The Analysis page shows these in your local time. If MT5's time difference changes (daylight saving), change `NEXT_PUBLIC_MT5_OFFSET_MINUTES` and redeploy; saved trades keep their stored time.

Advice is based only on your own past trades. It is a record of your habits, not a market prediction.
